Paola is in one of the greatest synclinal troughs there is in the state, yet large quantities of gas have been obtained from this synclinal trough. It would seem that, so far as our present knowledge of the subject would indicate, there is little if any relation between the location of anticlinals and synclinals and the accumulation of either oil or gas. Physical and Chemical Properties. Until quite recently we have had but few data regarding the physical and chemical properties of the oils and gases of Kansas. The lubricating oils sold from Paola were partially examined and were found to possess superior properties for lubricants. Other companies have had samples tested at the refineries, and Prof. E. H. S. Bailey, of the chemical department of the State University, has made a large number of careful examinations of both oil and gas. His paper appeared in the report of the Kansas State Board of Agriculture, from which the following tables have been taken. The specific gravity of the oil was taken; then it was subjected to fractional distillations, and the flash point and gravity for each distillate was determined. In the tables following, the left-hand column gives the range of temperature in the centigrade or Celsius scale at which the distillate was obtained, the second column the flash point of same, the third column the specific gravity, and the...
